Section 2: Digital twin of production (Big Data)

Big Data and artificial intelligence: out of industry specifics

The report considers the application of Big Data and artificial intelligence methods for solving non-sector specific tasks. These are tasks typically solved by departments such as marketing, sales, human resources management, juridical and financial services, IT-service and information protection service, PR-service, which are present in every company and industrial sector. The report is illustrated with cases having references to organization or particular expert who provided the case.
